

The Optimal Breast Center Workflow

Take a walk through a breast center powered by MagView

MagView software streamlines and automates your mammography workflow for superior efficiency.

1

Patient receives appointment reminder text and completes history online prior to visit.

2

Patient completes history on tablet in waiting room, if needed.

3

Technologist verifies all information with patient and performs exam.

4

Radiologist reads and reports via structured reporting or 3rd party dictation or hybrid of both.

Streamlined Reporting

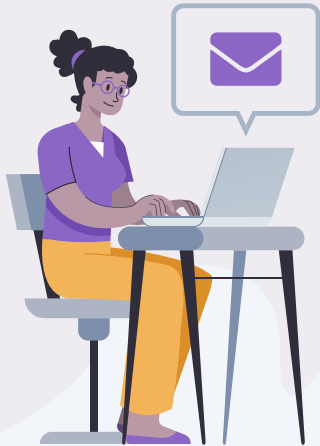

Various integration options for the most efficient reading workflow:

- Luminary Workflow Manager
- AI Integrations
- PowerScribe Data Point Integration
- Pathology Interface
- Risk Assessment Module
- Workstation Sync

! Risk Assessment

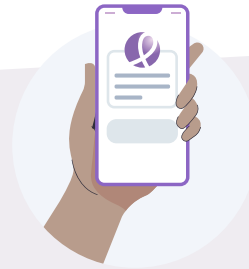

- Facility chooses risk model
- Integration of automated breast density score available
- Patient's risk score flagged for technologist and radiologist
- Automatic recommendations for Ultrasound, MRI, or genetic testing

5

Results

Patient receives lay results letter via online portal or through the mail.

Reminders

Patient receives reminder texts before follow-up or annual appointment.

Patient returns for follow-up or annual appointment.

✓ Track Patients

Patient's needs tracked ongoing to ensure nothing is missed.

✓ Monitor Breast Center Performance

- Gain a comprehensive view
- Built-in reports and dashboards
- Adhere to regulatory requirements
- Prepare for MQSA inspection
- Enable industry accreditations
